Open Tip

Open Tip permits access to tight spaces

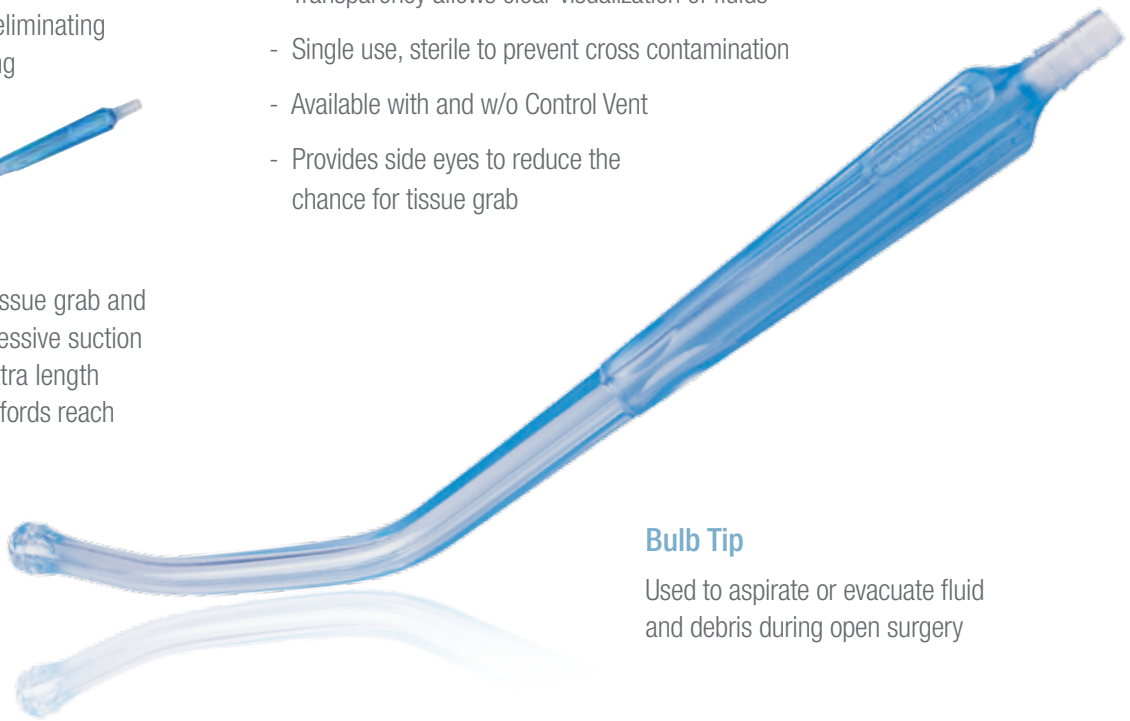

On /Off Tip

Sliding ON/OFF switch reduces suction noise while eliminating the need for clamping

Cardiac Tip

Fluted Tip reduces tissue grab and protects against excessive suction while the lumen's extra length (11½" or 29.5cm) affords reach into deep cavities

Bulb Tip

Used to aspirate or evacuate fluid and debris during open surgery

YANKAUER Suction Instruments

Developed in 1907 by Dr. Charles Yankauer, Yankauer Single Use Suction Instruments have become the most common suction instruments in the world. Large lumens provide rapid aspiration and resist clogging – removing fluid and debris from either a surgical site or body orifice (i.e. airway, abdomen, etc.).

- Sturdy shatter-resistant construction enables use for retraction
- Transparency allows clear visualization of fluids
- Single use, sterile to prevent cross contamination
- Available with and w/o Control Vent
- Provides side eyes to reduce the chance for tissue grab

BIG YANK™ Suction System

The Big Yank™ Suction System is the world's first truly large bore suction system – overcoming common clogging with our patented large bore system (1 1/32", 9mm I.D.) that rapidly evacuates solid or viscous matter (i.e. vomitus, bone chips, cement, clots, etc.).

When every second counts, the versatile, two-piece design operates as a standard Yankauer and when needed, quickly converts to a large bore system (1 1/32"), when tip is detached – offering a significant improvement in evacuation time that helps enhance patient care and outcomes.

- Adapts to pour spout on majority of suction canisters in the marketplace
- Ready to use. Comes complete with handle, detachable tip, universal canister connector and tubing length of choice (6' or 10') all pre-attached
- Available in Bulb Tip, Open Tip, Vented and Non-Vented styles

*Canister not included

SIGMOID INSTRUMENT

POOLE INSTRUMENT

SIGMOID Suction Instrument

The Sigmoid clear, single-use Suction Instrument is primarily used for sigmoidoscopies, colonoscopies and femur suctioning during hip replacements to evacuate blood, fluid and other debris.

- Designed for use with a rigid sigmoidoscope
- ON/OFF suction control to reduce tissue grab
- Available with select tubing pre-attached
- 18 French, 30cm

POOLE Suction Instrument

Designed to evacuate pooled blood, fluid and debris during deep abdominal surgeries and cesarean sections, Poole single-use specialty suction instruments feature three versatile positions that quickly convert from gentle sump action to pinpoint suctioning capabilities.

- Removable sheath for pinpoint suctioning
- Reduce Tissue grab with removable sheath
- Removable sheath has 132 large eyes to provide efficient and rapid suction

FRAZIER Suction Instruments

Used in open surgical procedures where fine, delicate suctioning is necessary to evacuate debris from the surgical site, every Frazier single use suction instrument is supplied with flake-resistant shafts and an obturator to facilitate shaping of the metal and clear the instrument of obstructions.

Olive Tip Frazier

- Optimal for suctioning delicate tissue and small body cavities
- Provides smooth side eyes to reduce the chance for any tissue trauma
- Full size handle provides a positive grip and has a control vent
- Can be used as a Pediatric Yankauer

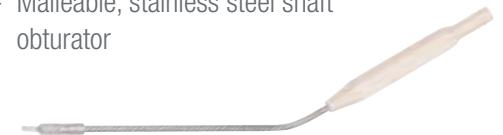

Frazier

- Full size handle provides a positive grip
- Control Vents allow suction control (18 French is non-vented)

Baron Frazier

- Disc-shaped handle provides delicate touch and balance for microsurgery
- Special, lightweight and flexible tubing is available to enhance surgeon's dexterity
- Malleable, stainless steel shaft obturator

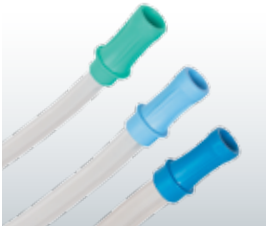

Soft Tip Frazier

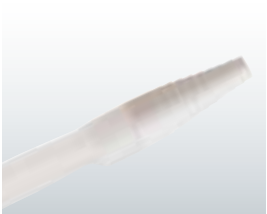

- The inside diameter of the end of the PVC tip is 4.5 French versus the shaft I.D. of 10 French
- Full size handle provides a positive grip and has a control vent
- Ideal for vascular or neurosurgical procedures where vessel trauma is a concern
- Soft, PVC tip helps reduce trauma and can reach safely into confined areas

PREMIUM
CONNECTORED

FRAZIER TUBING

Suction Connecting Tubing

Serving as the conduit from which suction instruments evacuate fluid and debris into the vacuum canister and source, ConMed's Suction Connecting Tubing is available in Premium Connected and Economy roll styles.

In addition, a wide range of sizes and configurations allow for efficient and cost-effective setup.

Tubing products are available in non-conductive, sterile and bulk, and non-sterile formats.

Premium Connected

- Factory installed, female connectors, color coded by size
- Strong to provide high collapse resistance
- Soft, pliable and low memory for ease of use
- Versatile connectors provide secure fit

Frazier

- Designed for use with Baron Frazier
- Lightweight, flexible feel enhances surgeon's dexterity
- For use under low levels of suction (not to exceed 15" H₂O)
- Male connector for easy setup and use

Economy

- 100' (30.5m) long rolls with integral blister connectors every 3' (.9m)
- Clean, Non-Sterile
