

ETCO₂ Sampling Cannulas

DISTRIBUTED BY

Button Filter

Minimizes entrance of moisture from sampling ports to monitor

Universal Connector

Pairs with all oxygen delivery systems

Reflective Orange Connector

Pairs with sidestream low flow capnography monitors

MedSource ETCO₂ Sampling Cannulas allow for a breath-by-breath sampling of ETCO₂ while simultaneously delivering oxygen.

Kink Resistant Tubing

Softened Nares

Ultra soft PVC material for patient comfort

Softened Tear Shaped Scoop

Lifts up and away from patient's lip for extended comfort

Sampling of ETCO₂ in exhaled respiratory gases allows for healthcare workers to assess adequacy of patient perfusion, ventilation and oxygenation in patients receiving critical care. These cannulas pair with Capnograph Sidestream Monitoring Systems and come in a variety of configurations to meet hospital, acute care and prehospital ETCO₂ monitoring needs.

SPECIFICATION

- Dip molded PVC nasal cannula and oral scoop
- Reflective orange connector
- Not made with natural latex rubber
- PVC material not made with DEHP
- 7' of kink resistant tubing
- Pair with any sidestream monitor (low flow 50ml/min)

Item #	Description	UOM
MS-35601A	Adult Nasal/Oral Dual CO ₂ Sampling Cannula W/ O ₂ Delivery, Orange Luer W/Reflective Conn., Sampling Scoop, Filter, 7ft.	25 EA/BX, 200 EA/CS
MS-35601P	Pediatric Nasal/Oral Dual CO ₂ Sampling Cannula W/ O ₂ Delivery, Orange Luer W/Reflective Conn., Sampling Scoop, Filter, 7ft.	25 EA/BX, 200 EA/CS
MS-35770	Intubated Sampling Line W/T-Connector, Orange Luer W/Reflective Conn., Filter, 7ft.	25 EA/BX, 100 EA/CS
