Monitor by Laerdal

Integrated patient monitoring
and defibrillation training

Add more realism to your BLS and ALS training

Monitor by Laerdal is a portable patient monitoring solution that fully integrates with Laerdal's latest generation of Resusci manikins with BLE (Bluetooth Low Energy) technology or a standardized patient to add more realism to your training. Monitor offers a full range of adjustable features that allow the instructor to customize their simulation training, ensuring learning objectives are met.

Versatile

Integrated

Use Monitor with any manikin or standardized patient, or pair with a Laerdal BLE-compatible manikin for fully integrated, real-time QCPR feedback. Learners can train using the following monitor skins to practice high-quality CPR, defibrillation, and pacing:

- Generic Monitor
- ZOLL X, R, R+
- LIFEPAK 15
- Tempus Pro
- IntelliVue 30

Full flexibility

Monitor can be modified to use as a defibrillator; ventilator; or patient monitor and can be used with either manikins or standardized patients.

Remote training

The TruMonitor and TruVent applications allow for remote simulation training. Instructors can train multiple learners at the same time either in a class setting or remotely from different locations.

Sustainable

Monitor's housing is made using 100% recycled plastic to provide a lightweight, durable solution that is fully portable.

Simulation flexibility

Realistic respiratory care training

Teach ventilation management training without the need for a ventilator: Monitor easily transforms into a simulated ventilator monitor giving learners the opportunity to practice the basic skills needed to operate a ventilator with ease.

Pair Monitor with the TruVent app and adjust underlying patient characteristics, creating clinically accurate respiratory simulations that will display appropriate pressure, flow, and volume curves in real-time.

Built for your needs

If you are new to simulation:

The perfect entry point

Monitor has everything you need to start training and includes:

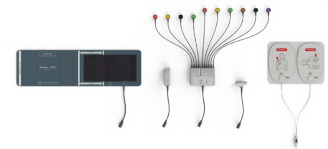

Monitor housing with an iPad Pro

Instructor tablet iPad

2-Year Subscription for either TruMonitor or TruVent app

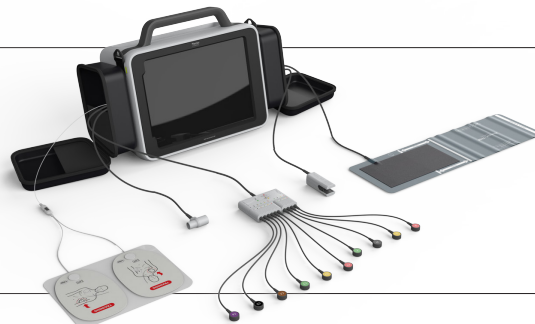

Set of simulated cables:
NIBP cuff, SpO2, etCO2, AED training pads, 4+6 lead ECG (ERC or AHA)

Monitor by Laerdal Bundle

Catalog No.

550-B-Monitor

Monitor, accessories and application license included.
