BLEEDING CONTROL

KITS, PACKS, STATIONS & TRAINERS

NORTH AMERICAN RESCUE®

www.NARescue.com • 888.689.6277

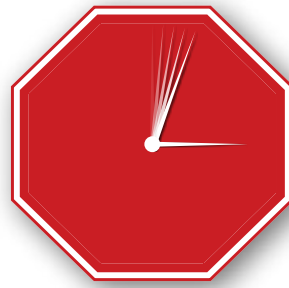

Every Second Counts

Death from Uncontrolled Bleeding can occur in as few as 3 to 5 Minutes

Trauma is a national health problem and after a traumatic injury, bleeding is responsible for over 35% of pre-hospital deaths. Examples of trauma include traffic & industrial accidents, natural disasters, falls, accidental injuries and intentional acts of violence such as shootings, stabbings and bombings. These types of injuries often result in uncontrolled bleeding. Without intervention these injuries can result in death within minutes – even before emergency medical services or other first responders can arrive.

North American Rescue is leading the way to equip bystanders and initial first responders with the essential medical gear needed to take immediate action in life threatening emergencies. These lifesaving modular aid components are designed for individuals or groups in public buildings and populated public areas to administer immediate bleeding control at the point of wounding.

3 to 5 MINUTES

***can mean the Difference
between Life and Death***

- A victim who is bleeding can ***quickly die before professional emergency responders arrive***
- ***Serious bleeding*** accounts for ***35% of prehospital deaths*** from traumatic injuries
- ***Life-threatening bleeding*** warrants immediate ***intervention***
- Basic ***bleeding control actions*** provided by bystanders can often make the ***difference between life and death***
