

When Seconds Count, Pelvic Stabilization Devices Save Lives

Rapid & Effective Pelvic Stabilization - One Size Fits Both Adults & Children

When seconds count, you need the most effective and reliable pelvic fracture treatment available.

The answer is not a bedsheet. It's a Pelvic Stabilization Device specifically designed to provide stabilizing symmetrical and circumferential compression. T-PODResponder is easy to apply by a single EMS professional in the field, provides symmetrical, circumferential compression, and does not need to be removed for MRI, X-Ray or CT scans.

Does Your Pelvic Stabilization Device Fit Both Adults & Children?

While many pelvic stabilization devices do not fit both adults and children, T-PODResponder is specifically designed to fit both adults and children of all sizes. This means that you only have to carry one type of device with you, and you don't have to choose from different sizes.

One Size Fits Adults & Children

Only One Device Needed

- Specifically designed to fit adults & children
- Save space by carrying just one device
- No need to choose/stock multiple sizes

Clinical Evidence Supports the Use of Pelvic Stabilization Devices

- **DeAngelis, Nicola A., et al:** Although both a circumferential sheet and T-POD were consistently able to decrease the symphyseal diastasis, only T-POD showed a statistically significant improvement in the diastasis when compared with injury measurements. In 75% of the cadaveric specimens (9 of 12), the T-POD was able to return the symphysis to normal (<10 mm of diastasis).
- **Tan, Edward, et al:** Separation of the pubic bones (symphyseal diastasis) was reduced by 60% when using pelvic stabilization.... (and) mean arterial pressure increased from 65.3 to 81.2 (about 25%), and heart rate beneficially declined from 107 bpm to 94 bpm.

The quotes above are taken from two of the four important studies reviewed in the Clinical Review Paper by Dr. Alan Moloff. To download the full paper and access full references visit go.pyng.com/pelvic.

One Person Can Apply

Unique Pulley System Design

- One person can easily apply in the field
- Symmetrical, circumferential compression
- Complete control of the tightening process

PM-155e

Reliable Pelvic Stabilization. Compact, Portable Package.

Small & Lightweight Design – Featuring a 3-4mm thickness compared to the 7-8mm thickness of the previous T-POD design, T-PODResponder is now smaller and more compact than ever to better fit into your emergency bag. (Photo on the left shows the new T-PODResponder compared to the old T-POD on the right.)

One Person Application - The unique easy-to-tighten pulley system means that T-PODResponder can be easily applied by just one person in the field.

One Size Fits Both Adults & Children - No need to stock or carry around different sizes. You can quickly and easily trim T-PODResponder to customize the fit for most people. For morbidly obese patients, you can easily combine two T-PODResponder devices together. For children, you may have to adjust the actual placement of the T-PODResponder depending on the child's size, and ensure you have a 6"-8" gap on small children.

100% Radiolucent - You do not have to remove and then reapply T-PODResponder for radiological procedures. Designed using no metallic parts, T-PODResponder can stay on and keep your patient's pelvic region stable during MRI, X-Ray and CT scans.

Symmetrical, Circumferential Compression - Designed using a unique pulley system spanning nearly the width of the belt, T-PODResponder offers compression that is evenly distributed on both sides of the pulley system and across the width of the binder.

Modulated Compression - Unlike a buckle system where compression can only be adjusted at certain settings, the T-PODResponder pulley system means that infinite adjustments can be made.

Over-tightening Prevention - T-PODResponder's pulley system features a 6-8" gap that is designed specifically to prevent over-tightening.

Improved Material - The new T-PODResponder uses new 100% polyurethane material that is thinner, breathable, latex-free, durable and contains moisture wicking capabilities. Better yet, the new material will not fray even when cut to size.

The T-PODResponder Clinical Advantage:

- Effective and easy-to-use device to stabilize the pelvic ring in patients that have suspected pelvic fractures and possible internal bleeding.¹
- Can substantially reduce transfusion requirements, length of hospital stay, as well as reduce mortality in patients with unstable pelvic fractures.²
- Can provide better stabilization of a globally unstable pelvic fracture than an external fixator.³
